WATERJETS UNLIMITED COMPLETES CUTTING JOB FOR CANON USA

(Ronkonkoma, NY—January 17, 2006) Waterjets Unlimited recently completed a large stone cutting job for Canon USA's headquarters, located in Lake Success, New York.

The job involved precision waterjet cutting of approximately 1,500 square feet of material. 3/4-inch thick granite was used on the project, including Black Impala, Violetta, Ruby Red and Black Absolute varieties. The piece sizes used varied from 2ft x 2ft, 4ft diameter and 4ft x 3ft – with one side having a radius and angled cuts to match up with the 4ft diameter pieces. In addition to the detailed cuts involved, there was also the matter of some intricate seam work.

“The seams needed to be less than 1/16 of an inch,” said Waterjets Unlimited President Mark Grindel, “in order to meet the architect's plans.”

The work was done on behalf of Waterjets' customer Lido Stone Works, of Calverton, New York.

“We were very happy with the Abrasivejet cutting work that Waterjets Unlimited did for us,” Lido's President, Eliot Mazzocca, said. “The cuts were absolutely clean and right on spec. The stone looked excellent when it was installed and Canon USA was very pleased with the results.

For more information on Waterjets Unlimited's economical, precision method of cutting, please contact them at 631-467-3855.
