

FOR IMMEDIATE RELEASE

WATERJETS UNLIMITED COMPLETES AMITYVILLE SCHOOL DISTRICT PROJECT.

Long Island, New York – Waterjets Unlimited has announced the recent completion of the decorative flooring project in the main entrance of the Park Avenue Elementary School in Amityville, New York. Waterjets Unlimited was commissioned by Brooklyn based American Tech. Flooring Company to produce the project. American Tech is a leader in the installation of intricate and unique residential and commercial projects.

The Amityville project consisted of 544 precision cut pieces fit together to create a compelling compass rose design. Four different tile materials were used to give the design texture and color.

“We enjoy the challenges presented to us when working with flooring companies like American Tech”, said Mark Grindel, President of Waterjets Unlimited, “The challenge for us was to transform the design from a paper blue print into a computer file that would be readable by the waterjet cutting equipment. We were very pleased with the outcome and I am sure the children will enjoy the design for years to come.”

Waterjets Unlimited is a leading provider of material cutting services, cutting complex and intricate shapes using water pressurized up to 60,000 psi and forced through a small nozzle. Waterjet Cutting is ideal for a wide range of materials from soft foams and plastics to stone and hardened steels. For high volume production or even single piece prototypes, Waterjets has proven to be one of the highest quality firms in the business.
